Paragraph proof: This is a type of proof that uses words to explain why a statement is true. It is often used to prove geometric theorems.

The Creation of Euclidean

Euclidean geometry is a system of geometry based on five postulates. By changing these postulates, we can create different geometries. For example, if we change the first postulate, we can create non-Euclidean geometries. These geometries are used in many fields, such as physics and astronomy.

1. A line segment can be extended indefinitely in both directions.

2. A circle can be drawn with any center and any radius.

3. All right angles are congruent.

4. If two lines are cut by a transversal so that alternate exterior angles are congruent, then the two lines are parallel.

5. If two lines are parallel and cut by a transversal, then alternate exterior angles are congruent.

1. An accountant must be able to segregate the various types of income and expenses and classify various assets and liabilities on the basis of their nature such that proper classification and segregation in the financial statements can take place. Also the accountant must be able to make proper entries (double entry, etc.) such that expenses or any income can be properly classified and debited/credited in the respective heads. An accountant may also have certain years of experience and technical knowledge as well. The accountant must be able to also help the auditor in auditing the financial statements by giving him help in the financial matters of the company and should also help the company in analyzing the different investment proposals.

2. Current Ratio = current assets / current liabilities

Current ratio describes the ratio between the current assets and current liabilities of a company and states the time current assets is of current liabilities. It is a liquidity ratio that helps in analyzing whether a company is able to meet its short-term obligations, etc.

ROE = net income / shareholders equity

Return on equity measures a profitability by analyzing the profit a company generates with the money that the shareholders have invested.

Example 2

Given that \overleftrightarrow{AC} intersects \overleftrightarrow{CD} , write a paragraph proof to show that A, C, and D determine a plane.

Since the two lines intersect, they must intersect at point C as two lines intersect in exactly one point. Points A and D are on different lines, so A, C, and D are noncollinear by definition of noncollinear. Since three noncollinear points determine exactly one plane, points A, C, and D determine a plane.

Paragraph

A thermal power plant produces electric power of 600 MW at 4000 V, which is to be transported over a distance of 20 km away from the power plant for consumer usage. It can be transported either directly with a cable of large current-carrying capacity or by using a combination of step-up and step-down transformers at the two ends. The drawback of the direct transmission is the large energy dissipation. In the method using transformers, the dissipation is much smaller. In this method, a step-up transformer is used at the plant end so that the current is reduced to a smaller value. At the consumer end, a step-down transformer is used to supply power to the consumer at the specified lower voltage. It is reasonable to assume that the power cable is purely resistive and the transformers are ideal with a power factor unity. All the currents and voltages mentioned are rms values.

One More Week Until Your Unit Test!!!

1. Pick up notes from the front table
2. Take out your homework from last night and a **red pen**.
3. Take out your whiteboard and whiteboard marker.
4. Start writing down the **learning objective**:
 - SWBAT write paragraph proofs.
 - SWBAT write a two-column proof given a paragraph proof.

2-5 word problem practice postulates and paragraph proofs answers. 2-5 skills practice postulates and paragraph proofs answers. 2-5 postulates and paragraph proofs answers. What is a proof paragraph. 2-5 practice postulates and paragraph proofs answers page 34.

Try to prove a logical statement in which every statement you make is supported by a statement that is accepted as true. If possible, draw a diagram to illustrate the given. 7 Postulates and Paragraph Tests Five essential parts of a test: Declare the theorem or conjecture to be tested. Answer: Never. Postulate 2.7 states that if two planes intersect, then their intersection is a line. Example 5-2d 5 c. Postulate 2.4 A plane contains at least three points that are not in the same line. Example 5-2e 6 Postulates and Tests of Paragraph Theorem A "A proposition" or conjecture that can be shown to be true. c. 8 Given is the midpoint of and X is the midpoint of writing a paragraph test to demonstrate that Example 5-3b 9 Test: We are given that S is the midpoint of and X is the midpoint of By the definition of midpoint. Using the definition of midpoint congruent segments. Also using the given instruction and the definition of congruent segments. If then S and X are midpoints, By substitution, and by definition congruence, Example 5-3c Thank you for your participation! Two planes always cross a line. Determine if each statement is not always, sometimes or never true. b. Plane A and plane B cross at one point. Explain. Postulate 2.3 A line contains at least two points. Basic ideas about points, lines and planes can be stated as postulates. Theorem 2.8 Midpoint Theorem If M is the midpoint of segment AB, then segment AM is congruent with segment MB. Answer: Always; Postulate 2.1 states that through any two points, there is exactly one line. Postulate 2.1 Through any two points, there is exactly one line. Answer: Sometimes. Postulate 2.7 states that if the two planes cross, then their intersection is not a line. 2 Postulates and Paragraph Tests of three points that are not on the same line, there is exactly one plane. 1 Postulates and Postulated Paragraph Testing (Axioma) Axioma.
